

Step 1 : Press the start key or click the start menu item to open up the start menu.

Step 2 : Click on All Programs and the Software Development menu item for more options.

Step 3 : Find the menu item named WinPython 3.6.6.1 and click it.

Something

Step 4 : Click on IDLE (Python GUI) to open IDLE.

A screenshot of a Windows desktop environment. The main focus is a window titled 'Python 3.4.3 Shell'. The window's menu bar includes 'File', 'Edit', 'Shell', 'Debug', 'Options', 'Window', and 'Help'. The text inside the window reads: 'Python 3.4.3 (v3.4.3.90730: 0x601, Feb 14 2015, 12:43:40) [MSC v.1600 64 bit (AMD64)] on win32', 'Type "copyright", "credits" or "license()" for more information.', '>>> print("Hello World")', 'Hello World', and '>>> |'. The Windows taskbar at the bottom shows icons for the Start button, Internet Explorer, File Explorer, a media player, and the Python Shell. The system tray on the right shows the date and time as '1/16/15 5:04 PM'.

Step 5 : Make sure that the first line says Python 3.~~something~~ (instead of some other version). Test out the Python 3 interpreter by typing in the text

`print("Hello World")` as shown in the image. Hit enter to run that command and observe the output (blue text).
